

SOLAR SYSTEM SPOTLIGHT

JUPITER

King of the planets — a colossal world of swirling stormy gas, with more than 100 moons and a 350-year-old hurricane.

★ ★ ★ DID YOU KNOW? ★ ★ ★

**BIGGER THAN ALL THE REST**

Jupiter is so massive that **all the other planets in our solar system could fit inside it more than twice over**. It's a "failed star" — almost massive enough to ignite!

**A 350-YEAR STORM**

The Great Red Spot is a hurricane **bigger than Earth** that has been spinning on Jupiter for at least 350 years. Astronomers first spotted it in the 1600s.
