

SOLAR SYSTEM SPOTLIGHT

SATURN

The jewel of the solar system — wrapped in the brightest rings of any planet, with more moons than any other world.

**6th**PLANET FROM
THE SUN**29**EARTH YEARS =
1 SATURN YEAR**10.7**HOURS =
1 SATURN DAY**292**MOONS
(MOST OF ANY PLANET)

★ ★ ★ DID YOU KNOW? ★ ★ ★

**RINGS OF ICE AND ROCK**

Saturn's rings span **280,000 km wide** but are only 30 metres deep — made of billions of pieces of ice and rock, from snowflakes to chunks the size of houses.

**IT WOULD FLOAT**

Saturn is **less dense than water**. If you could find a bathtub big enough, Saturn would actually float on top instead of sinking. A truly fluffy planet!
