— A TOUR OF —

OUR SOLAR SYSTEM

Eight planets, one star, billions of years of cosmic history

SUN

OUR STAR

MERCURY
1

Smallest. Closest to Sun. Covered in craters.

VENUS
2

Hottest planet. Spins backwards. Brightest in our sky.

EARTH
3

Our home. Liquid water. The only world with life.

MARS
4

The Red Planet. Olympus Mons. Robot rovers exploring now.

JUPITER
5

Largest planet. Great Red Spot. 100+ moons.

SATURN
6

Brightest rings. Most moons (292). Less dense than water.

URANUS
7

Tipped on its side. Ice giant. Faint vertical rings.

NEPTUNE
8

Farthest planet. Fastest winds. Found by maths.

SIZES SHOWN ROUGHLY RELATIVE.
DISTANCES ARE **NOT** TO SCALE.
(SEE OUR SCALE-MODEL HANDOUTS FOR THE REAL DISTANCES!)
